After the 1990s, due to the development of laser technology, photoelectric detectors and electronic signal processing technology, active infrared night vision technology represented by laser distance gating imaging technology has gained new vitality. Compared with passive night vision systems, laser range-gated imaging systems (also known as laser imaging radar) have long range, high resolution and signal-to-noise ratio, can display target details and high image signal-to-noise ratio, and can be used in rain, Characteristics of working in severe weather environments such as snow and fog. Therefore, it is used in military reconnaissance, search and rescue, surveillance, underwater detection, etc.

Laser range gating imaging technology has attracted the attention of major military powers in the world. Many units and institutions have conducted in-depth research on this technology, such as the Swedish Defense Research Center (FOI), the British BAE Company, the American INTEVAC Company and Goodrich Company. SUI group, Canadian OBZ-ERV company, German Research Institute for Optronics and Pattern Recognition (RIOPR), etc., and many units have successfully developed equipment.
