Bi-axially Oriented Polyamide Film is a high-performance polymer film. Through specific production processes, it stretches the polyamide resin in two mutually perpendicular directions (longitudinal and transverse), optimizing the molecular arrangement, thereby significantly enhancing the mechanical properties, high-temperature resistance, chemical corrosion resistance, and electrical insulation of the film. This film can maintain stable performance within a wide temperature range and features high strength, high modulus, low dielectric constant, and low dielectric loss. It is widely used in aerospace, microelectronics, liquid crystal display, electrical insulation, and other fields.
