The global Bi-colour Level Gauge market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Two-color level gauges are used to detect water and steam levels in boilers. They rely on the optical principle of light refraction through two colored optical filters with different refractive indices. A special red and green illuminator is installed on the back of the instrument body to create a dual lighting system. The light passes through the fluid, allowing you to see the red vapor and the green liquid. This allows the water level and steam level in the boiler to be determined.
