Bi-metal blades are cutting tools made by bonding two different types of metal—typically a high-speed steel (HSS) cutting edge and a flexible alloy steel backing—using methods such as electron beam welding, laser welding, or explosion welding. The high-speed steel provides excellent hardness and wear resistance at the tooth edge, while the flexible backing offers strength and fatigue resistance, reducing the risk of breakage. This combination delivers both cutting performance and durability, making bi-metal blades ideal for cutting metal, wood, plastic, and other materials across a wide range of industrial, construction, and DIY applications.
