BIA Analyzer is a device that uses bioimpedance technology to measure and analyze body composition. By transmitting low-intensity electric current to the human body and measuring the impedance of body tissue to the current, the BIA Analyzer can estimate multiple components such as body fat, muscle mass, body water, bone mass, etc. The basic principle of bioimpedance is based on the different conductivity of different tissues to electric current. The impedance of fat tissue, electrolytes and fat-free tissue to electric current is different.
