BOPE is an acronym of the term Bi-axially Oriented Polyethylene, a chemical designation for a category of flexible plastic films created under specific conditions. This specification of Polyethylene (PE) film is manufactured using a 'blown' process, meaning that the plastic sheeting is pulled in two directions, otherwise known as 'bi-axially' stretched. This biorientation is typically achieved by inflating a 'bubble' shaped column of film inside an extruder using air pressure, which serves to pull the film both in transverse (TD) and machine direction (MD) at the same time, before the material is cooled and laid flat. Alternatively, biorientation can be achieved using a specialist tenter frame to apply the two-directional stretch force uniformly, but this method is mostly used for stabilised films such as BOPP (Biaxially-Oriented Polypropylene).

The global market for Biaxially Oriented Polyethylene Film is estimated to increase from US\$ million in 2021 to reach US\$ million by 2028, exhibiting a CAGR of % during 2022-2028. Keeping in mind the uncertainties of COVID-19 and Russia-Ukraine War, we are continuously tracking and evaluating the direct as well as the indirect influence of the pandemic on different end use sectors. These insights are included in the report as a major market contributor.
