The global Biciruizumab market size is predicted to grow from US\$ 2464 million in 2025 to US\$ 8853 million in 2032; it is expected to grow at a CAGR of 15.6% from 2026 to 2032.

Bevacizumab is a recombinant humanized monoclonal antibody primarily used for the treatment of various types of cancer, including colorectal cancer, non-small cell lung cancer, and renal cell carcinoma. It works by targeting and inhibiting the action of vascular endothelial growth factor (VEGF), preventing the formation of new blood vessels in tumors, thus reducing tumor blood supply and inhibiting tumor growth and spread. Bevacizumab is widely used in combination cancer therapies, typically in conjunction with chemotherapy or other targeted drugs to enhance therapeutic efficacy. The drug is administered intravenously and has been approved for clinical use in multiple countries and regions. In 2025, global Bimekizumab production reached approximately 1.2 million vials.

Bevacizumab holds an important position in the global cancer drug market, especially in the treatment of various solid tumors, such as colorectal cancer, non-small cell lung cancer, and renal cell carcinoma. With the continuous rise in cancer prevalence and ongoing innovations in cancer treatment, the market demand for Bevacizumab is steadily increasing. This drug works by inhibiting vascular endothelial growth factor (VEGF), blocking tumor angiogenesis, and significantly improving treatment outcomes, particularly when used in combination with chemotherapy and other targeted therapies. The market prospects for Bevacizumab are very promising, particularly in developing countries and emerging markets, where improvements in healthcare infrastructure and the widespread adoption of cancer screening will benefit more patients. Although Bevacizumab is priced relatively high and faces competition from generic drugs, it remains a core component of many cancer treatment regimens. Additionally, as research into Bevacizumab's use in other cancer types continues to expand, it is

expected that the drug's indications will continue to grow, further driving market growth.
