Bicycle carbon fiber suspension is a suspension system made of carbon fiber materials. It is used to connect the bicycle frame and wheels. It is used to absorb shock and absorb bumps and impacts during riding, improving riding comfort and stability. Carbon fiber suspension is often used in models that require a high-performance suspension system, such as high-end bicycles or mountain bikes. The main components of this suspension system include carbon fiber suspension arms, connectors, springs and shock absorbers. Its structure is lightweight, strong, durable and has good shock absorption effect. Because carbon fiber materials have excellent strength and lightweight properties, carbon fiber suspensions are lighter and stronger than traditional metal suspensions, and have better corrosion resistance.

The global Bicycle Carbon Fiber Suspension market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
