A bicycle electronic gear shifter is a drivetrain control system that uses electronic signals to manage gear shifting on a bicycle. Unlike traditional mechanical cable-based systems, it uses electronic buttons or wireless commands to control small motors that actuate the derailleur, enabling precise, fast, and reliable gear changes. The technology is commonly used in high-end road bikes, mountain bikes, and electric bicycles to improve shifting performance and riding experience.

Upstream suppliers mainly include micro motor manufacturers, electronic control chip providers, battery suppliers, sensor manufacturers, and precision mechanical component producers. Downstream applications include high-end road bicycles, mountain bikes, electric bicycles, and professional racing bicycles. The overall industry gross margin generally ranges from 30% to 50%, positioning it within the high-end bicycle component segment.

In 2025, the global production of bicycle electronic gear shifters is expected to reach 1.35 million units, with an average price of \$170 per unit.
