## Abstracts

The global Bicycle Lubricants market size is predicted to grow from US\$ 137 million in 2025 to US\$ 237 million in 2032; it is expected to grow at a CAGR of 8.3% from 2026 to 2032.

Bicycle oil is a special oil used to lubricate bicycle components. It is mainly used to reduce friction, reduce wear and protect metal parts to extend the life of the bicycle. It is commonly used on chains, gears, brake systems and other moving parts. A good quality chain lubricant is essential to the performance and life of the entire drivetrain. As the chain passes through the cassette, sprockets and rear derailleur pulleys, any contamination or lack of lubrication will gradually wear out the precision-machined teeth of these components, causing noise, reduced efficiency, rough shifting and ultimately high replacement costs. In 2024, sales volume was 5.25 million units, with an average price of \$25, a single-line production capacity of 250,000 units, and a gross profit margin of 38%.

The bicycle lubricant market is benefiting from the global cycling boom, especially the rapid adoption of e-bikes and mountain bikes (MTBs). According to reports, the global market size for bicycle maintenance oils is growing and is expected to maintain steady growth in the coming years. Simultaneously, consumer demand for high-performance lubricants is rising, with products featuring wear resistance, long lifespan, and resistance to harsh weather conditions (rain, snow/dust) becoming increasingly popular. Green environmental protection and technological innovation are becoming mainstream.

With increasing environmental awareness and stricter regulations, the proportion of biodegradable and plant-based lubricants is constantly increasing. Nanotechnology, clean formulations, and smart packaging (such as precision nozzles to reduce waste) are becoming hot directions in new product development. This green and intelligent

transformation not only enhances the environmental attributes of products but also helps brands strengthen their differentiated competitiveness. Furthermore, with the expansion of business models such as shared bicycles and urban commuter fleets (e.g., bicycle rental services), the demand for lubricants that are highly efficient in maintenance, environmentally friendly, and safe to use is also increasing.
