Abstracts

The global Bidirectional Steel Plastic Geogrid market size is predicted to grow from US$ 527 million in 2025 to US$ 736 million in 2032; it is expected to grow at a CAGR of 5.0% from 2026 to 2032.

In 2024, global Bidirectional Steel Plastic Geogrid production reached approximately 151.11 million square meter, with an average global market price of around US$ 3.4 per square meter. A bidirectional steel-plastic geogrid is a high-performance geosynthetic reinforcement material. It is composed of a high-density polyethylene (HDPE) or polypropylene (PP) plastic matrix into which high-strength steel wires or strands are embedded as reinforcing cores. The composite is formed through a specialized extrusion coating and welding process, resulting in a grid structure with high tensile strength in both the machine and cross-machine directions. Its core characteristic lies in the synergy between the high strength and low creep of the steel and the corrosion resistance and durability of the plastic. The plastic coating provides long-term, effective anti-corrosion protection for the steel, enabling it to maintain persistent mechanical properties even in harsh geological and chemical environments. It is primarily used in permanent reinforcement projects demanding extremely high strength and longevity.

United States market for Bidirectional Steel Plastic Geogrid is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
