Bilayer microspheres have a core-shell structure, where a biodegradable polymeric material mixed with a drug serves as the core of the microsphere and another biodegradable polymeric material serves as the shell. Unlike pore-forming microspheres, the release of bilayer microspheres depends mainly on the core-shell structure.

The global Bilayer Microspheres market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of %from 2024 to 2030.
