The global Bile Acid Resins market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Bile acid resins, also known as bile acid sequestrants, are a class of cholesterol-lowering drugs that work by binding to bile acids in the intestines. By binding to these acids, bile acid resins prevent their reabsorption into the bloodstream, forcing the liver to use more cholesterol to produce additional bile acids. This process reduces the overall cholesterol levels in the blood, particularly low-density lipoprotein (LDL) or 'bad' cholesterol. Common examples include cholestyramine, colestipol, and colesevelam.

United States market for Bile Acid Resins is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
