The global Bile Aesculin Agar market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Bile aesculin agar is a selective and differential growth medium used primarily for the identification of enterococci and group d streptococci. It contains bile salts, which inhibit the growth of gram-positive bacteria, and aesculin, which can be hydrolyzed by certain bacteria. When aesculin is hydrolyzed, it reacts with iron salts in the medium to produce a dark brown or black complex, indicating a positive result. This medium is particularly useful in clinical microbiology for the isolation and identification of enterococci from clinical specimens, as well as in food microbiology to detect fecal contamination. Its selective properties make it an important tool for distinguishing these organisms from other non-target bacteria.

United States market for Bile Aesculin Agar is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
