Bile duct is a network of tube that connects the liver to the gall bladder. Bile duct carries a fluid called bile which is synthesized in the liver and stored in the gall bladder. The primary function of bile is breakdown of fats during digestion. Bile duct cancer is commonly known as cholangiocarcinoma. The particular cause of bile duct cancer is unknown but few factors that are responsible for developing bile duct cancer are long-term inflammation in the liver, biliary stones, abnormalities in bile duct such as cysts, infection with liver flukes parasite that causes infection in bile duct leading to cancer, and exposure to harmful chemicals and toxins. Major symptoms associated with bile duct cancer includes jaundice, weight loss, loss of appetite, discoloration of urine and stool, abdominal pain, itching, and fever.
