Bilgewater separator provides effective two-stage separation of oily wastewater in land-based power plants and on board vessels at sea without the requirement of back flushing or the addition of activated carbon, chemicals, membrane, or other filters. The critical requirement to keep world's oceans and its ecosystems productive and healthy, the Bilgewater is treated to reduce the oil contents to levels to meet international regulations for releasing in the environment. The commitment of ship industry to a zero tolerance approach to any non-compliance of the regulations and strict adherence to International Maritime Organization (IMO) requirements is expected to drive the demand of Bilgewater separator during the forecast period. Furthermore, easy initial start-up and commissioning, easy installation with pre-mounted system, and complete delivery are some of the benefits served by Bilgewater separator for shipyards. Moreover, Bilgewater separator does not have any moving parts along with operating at ambient temperature, customization, and compact & flexible design availability makes it more attractive leading to gain more traction in the global market. Gravity Oil water separators, centrifugal separators, and polishing are the major treatment stages or unit operations to sufficiently polish and clean Bilgewater to comply with standards. In terms of application, global Bilgewater separator market is estimated to be majorly dominated by shipbuilding industry during the forecast period. Some of the prominent components of Bilgewater separator are pressure gauge, strainer, pump, motor, three-way valve, solenoid valve, water test cock, among others which allows the reasonable use of the separator in any limited installation space.
