Bilirubin (formerly referred to as haematoidin and discovered by Rudolf Virchow in 1847) is a yellow compound that occurs in the normal catabolic pathway that breaks down heme in vertebrates. This catabolism is a necessary process in the body's clearance of waste products that arise from the destruction of aged red blood cells. First the hemoglobin gets stripped of the heme molecule which thereafter passes through various processes of porphyrin catabolism, depending on the part of the body in which the breakdown occurs. For example, the molecules excreted in the urine differ from those in the faeces. The production of biliverdin from heme is the first major step in the catabolic pathway, after which the enzyme biliverdin reductase performs the second step, producing bilirubin from biliverdin.

Bilirubin Meters measure the bilirubin level in patient body.

Global Bilirubin Meters key players include Philips, Drager, AVI Healthcare, Qili Medical, etc. Global top four manufacturers hold a share over 45%.

Asia-Pacific is the largest market, with a share about 50%, followed by Europe, and North America, both have a share over 65 percent.

In terms of product, Transcutaneous is the largest segment, with a share over 85%. And in terms of application, the largest application is Hospital, followed by Clinic, etc.
