According to this study, the global BIM Modeling Services market size will reach US\$ 11876 million by 2031.

BIM modeling services refer to the creation, management and sharing of three-dimensional information models of buildings or infrastructure projects through digital means to support full life cycle management from design, construction to operation and maintenance. These services include not only the modeling of building geometry, but also multi-dimensional information such as structure, electromechanical (MEP), materials, time (4D), and cost (5D). BIM modeling services use a unified data platform to achieve multi-professional collaborative design, conflict detection, construction simulation, progress control, cost estimation, facility management and other functions, significantly improving project efficiency and reducing risks and costs. It has become an indispensable digital infrastructure in modern construction projects and is widely used in residential, commercial, industrial, transportation, energy and other fields.
