Binaural recording is a method of recording sound that uses two microphones, arranged with the intent to create a 3-D stereo sound sensation for the listener of actually being in the room with the performers or instruments. This effect is often created using a technique known as dummy head recording, wherein a mannequin head is fitted with a microphone in each ear. Binaural recording is intended for replay using headphones and will not translate properly over stereo speakers. This idea of a three-dimensional or 'internal' form of sound has also translated into useful advancement of technology in many things such as stethoscopes creating 'in-head' acoustics and IMAX movies being able to create a three-dimensional acoustic experience.
