The global Bio-based AN market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

Bio-based acrylonitrile, also known as bio-AN, is a chemical compound that serves as a key building block for the production of acrylic fibers, plastics, and other materials. Traditional acrylonitrile is derived from petrochemical sources, but bio-based acrylonitrile is produced from renewable biomass feedstocks such as plant sugars, agricultural residues, or other organic materials.

The development of bio-based acrylonitrile is part of a broader effort to reduce dependence on fossil fuels and mitigate the environmental impact associated with traditional petrochemical processes. By utilizing renewable resources, bio-based acrylonitrile has the potential to offer a more sustainable alternative for various industries, including textiles, automotive, and packaging.
