The global Bio-Based Elastomers market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

Bio-Based Elastomers refer to synthetic elastomers that are derived from renewable resources such as biomass, vegetable oils, or plant materials. These materials are considered as sustainable alternatives to traditional synthetic elastomers, which are derived from non-renewable resources such as petroleum.

The market for bio-based elastomers is driven by the growing demand for sustainable materials across various industries, including automotive, construction, and consumer goods. The use of bio-based elastomers can help reduce carbon emissions, decrease dependence on fossil fuels, and enhance the biodegradability of products.
