The global Bio-Based Recycled Chemical Fiber market size is predicted to grow from US\$ 4656 million in 2025 to US\$ 8160 million in 2032; it is expected to grow at a CAGR of 8.5% from 2026 to 2032.

Bio-based recycled chemical fiber is a kind of synthetic fiber made from natural plant fiber or animal fiber through chemical treatment and regeneration process. This fiber combines the advantages of natural fibers and the controllability of chemical fibers, has good biodegradability and environmental protection, and has gradually become one of the research and development priorities of the textile industry. Bio-based recycled chemical fibers use natural plant or animal fibers as raw materials, reduce dependence on fossil fuels and limited resources in the production process, and have lower environmental impact. With increasing concerns about environmental protection and sustainability, the market demand for this fiber is likely to increase.
