Biodegradable filler masterbatch is an eco-friendly and sustainable solution for plastics that helps reduce environmental pollution. It is made up of natural materials that can be decomposed by bacteria or other living organisms, leaving behind no harmful residues. The main purpose of biodegradable filler masterbatch is to enhance the biodegradability of plastics. When added to plastic products, it helps accelerate the natural decomposition process of the plastic material, making it easier for microorganisms to break down the plastic into simpler compounds that can be absorbed by the environment. This type of masterbatch is typically made up of biodegradable polymers such as PLA, PBAT, and PHA, and natural fillers such as corn starch, wheat starch, and rice husk. These materials are renewable, abundant, and cost-effective, making biodegradable filler masterbatch an ideal solution for sustainable and environmentally friendly packaging.

The global Bio Degradable Filler Masterbatch market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
