Abstracts

The global Bio-Ethanol Gasoline market size is predicted to grow from US\$ million in 2025 to US\$ million in 2031; it is expected to grow at a CAGR of %from 2025 to 2031.

The impact of the latest U.S. tariff measures and the corresponding policy responses from countries worldwide on market competitiveness, regional economic performance, and supply chain configurations will be comprehensively evaluated in this report.

Volatile petroleum prices and increase in awareness on fossil fuels' contribution towards climate change are attracting interest towards bio-based products. Gasoline prices are volatile due to fluctuating crude oil prices. Reducing dependence on petroleum-based fuels, price volatility, and supply disruptions are the primary reasons behind the introduction of energy policies, which is driving the bioethanol market. Bioethanol could be the primary alternative source of fuel for the transport sector which is highly dependent on crude oil-based fuels (gasoline).

With the increasing percentage of bioethanol in blended fuel, the dependency on gasoline will reduce and be less vulnerable to transportation fuel price fluctuations.
