According to this study, the global Bio Similar & Subsequent Entry Biologic market size will reach US\$ million by 2031.

Bio Similar, also known as Subsequent Entry Biologics (SEBs), are biological products that are highly similar to an already approved biological reference product. They are designed to have comparable quality, safety, and efficacy to the reference product, and are approved based on demonstrating similarity in terms of structure, function, pharmacokinetics, pharmacodynamics, immunogenicity, and clinical outcomes. Bio Similar are different from generic drugs, which are identical copies of small-molecule drugs that can be easily synthesized.

The global pharmaceutical market is 1475 billion USD in 2022, growing at a CAGR of 5% during the next six years. The pharmaceutical market includes chemical drugs and biological drugs. For biologics is expected to 381 billion USD in 2022. In comparison, the chemical drug market is estimated to increase from 1005 billion in 2018 to 1094 billion U.S. dollars in 2022. The pharmaceutical market factors such as increasing demand for healthcare, technological advancements, and the rising prevalence of chronic diseases, increase in funding from private & government organizations for development of pharmaceutical manufacturing segments and rise in R&D activities for drugs. However, the industry also faces challenges such as stringent regulations, high costs of research and development, and patent expirations. Companies need to continuously innovate and adapt to these challenges to stay competitive in the market and ensure their products reach patients in need. Additionally, the COVID-19 pandemic has highlighted the importance of vaccine development and supply chain management, further emphasizing the need for pharmaceutical companies to be agile and responsive to emerging public health needs.
