Bio Soluble AES Fiber Tape is a high-temperature insulation material made of artificial glassy alkaline earth silicate fibers, with the main components being CaO, MgO, and SiO₂. It is not classified as a carcinogen and is an environmentally friendly alternative to refractory ceramic fibers. This fiber tape is produced through spinning and weaving processes. Depending on the specific application conditions, it can be reinforced with materials such as glass fibers or heat-resistant alloy wires. It can be continuously used at temperatures up to 1050°C and short-term used at up to 1260°C. It has excellent resistance to acid and alkali corrosion and molten metal erosion. Its typical applications include insulation and heat preservation for kilns, pipes, and containers, sealing for furnace doors, valves, and flanges, materials for fire doors and fire curtains, high-temperature furnace door curtains, and insulation for engines and instruments. It also features outstanding insulation performance, low thermal conductivity, low heat storage capacity, and good sound absorption properties, effectively reducing waste disposal costs.
