Biosoluble fiber felts are made of alkaline earth silicate wool and have an extremely uniform structure. They can withstand sustained high temperatures up to 1,260 °C, have low thermal conductivity, good high-temperature stability, and are lightweight, smooth, flexible and easy to handle. They have low persistence, which means they are excreted faster by the body while maintaining their excellent thermal insulation and fire protection properties, making them an ideal solution to replace ceramic fibers.

The global Bio-Soluble Fibre Felts market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of %from 2024 to 2030.
