The global Bioabsorbable Materials in Orthopaedics market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Bioabsorbable materials in orthopaedics are specialized materials used in medical devices, such as screws, pins, plates, and sutures, that naturally dissolve and are absorbed by the body over time. These materials are primarily used in orthopedic surgeries to repair bones, ligaments, and tendons. Unlike traditional metal implants, which may require removal after healing, bioabsorbable implants gradually break down as the tissue heals, eliminating the need for a second surgery. These materials are typically made from polymers like polylactic acid (PLA), polyglycolic acid (PGA), or polydioxanone (PDO), and they support healing while reducing the risk of long-term complications, such as infection or implant migration. Bioabsorbable materials are widely used in fracture fixation, ACL reconstructions, and other orthopedic procedures.

United States market for Bioabsorbable Materials in Orthopaedics is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
