The global Bioabsorbable Orthopedic Screws and Plates market size is predicted to grow from US\$ 1767 million in 2025 to US\$ 2717 million in 2032; it is expected to grow at a CAGR of 6.5% from 2026 to 2032.

Bioabsorbable orthopedic screws and plates are temporary fixation implants made from degradable polymers, polymer-ceramic composites or bioresorbable metals, designed to provide mechanical support during bone healing and gradually degrade after the fixation function is no longer needed. They are mainly used in sports medicine, small-bone trauma, cranio-maxillofacial surgery and pediatric or revision-sensitive procedures where avoiding secondary implant removal is clinically valuable. In 2025, Global bioabsorbable orthopedic screw and plate sales are estimated at about 21 million Units, with an average ex-works price of about 86 US\$/Unit. The chain runs from medical-grade PLLA/PLDLA/PGA, β -TCP, bioresorbable magnesium materials and precision machining or injection molding to sterile implant manufacturing, orthopedic instrument sets, regulatory approval and hospital surgical use.

Market demand is supported by the rising volume of sports medicine and small-bone fixation procedures, surgeons' interest in reducing implant-removal surgeries, better imaging compatibility compared with metal implants, and continuous material improvement that narrows the gap in mechanical strength and degradation control. Growth is strongest where clinical value is clear, such as ACL reconstruction, CMF fixation, pediatric trauma and procedures sensitive to hardware prominence.
