The global Bioabsorbable Screws market size is predicted to grow from US\$ 905 million in 2025 to US\$ 1436 million in 2032; it is expected to grow at a CAGR of 7.0% from 2026 to 2032.

Bioabsorbable screws are made from poly L-lactic acid (PLLA) and are absorbed by the body. Bioabsorbable interference screws are used extensively in orthopaedic procedures, and they are frequently used for graft fixation in ACL (anterior cruciate ligament) reconstruction.

Bioabsorbable interference screws are widely used in orthopedic surgeries, including graft fixation in ACL (anterior cruciate ligament) repair. These screws secure the ACL graft in the same way that titanium screws do. However, they have the potential benefits of allowing magnetic resonance imaging (MRI), decreasing stress shielding from the gradual transfer of load during degradation, and hypothetically reducing the difficulty of revision surgery because there are no implants to remove. Numerous studies examining clinical results following the use of bioabsorbable screws have shown graft durability during screw disintegration. Bioabsorbable screws have several benefits over metallic implants, including the ability to dissolve within the body, removing the need for surgical removal. These can also provide the required mechanical support for the tissue-rebuilding process. Key companies new product launches are anticipated to fuel global bio-absorbable bone screw market development. Introducing new products offers a diverse variety of bio-absorbable products for orthopedic patients to choose from, which is anticipated to contribute to the development of the global bio-absorbable market. The growing number of orthopedic patients is anticipated to drive the worldwide bio-absorbable bone screw market. Bioabsorbable screws are used in orthopedics, sports accidents, and traumatology. These screws are used in orthopedic procedures to

restore the anterior cruciate ligament, meniscal repair, and fractures. The majority of market participants are focused on customizing the material characteristics of bioabsorbable and composite materials. However, bioabsorbable fasteners have drawbacks such as irritation, mechanical strength loss, and osteolysis.
