Bioadhesive microspheres are preparations in which drugs and adhesive materials are dispersed in a carrier or drug-containing microspheres are coated with adhesive materials. When such microspheres reach the mucosal surface, the adhesive material in them can adhere to the biological mucosa, thereby staying on the mucosal surface for a long time and sustaining the release of drugs. This preparation is designed to increase drug absorption, improve drug bioavailability, or increase drug concentration in local diseased tissues, improve efficacy, and reduce adverse reactions.

The global Bioadhesive Microspheres market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
