The global Biobased Carbonates market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Biobased carbonates can not only modify polylactic acid, but also produce polycarbonates, high molecular weight polyester resins, and epoxy resin hardeners through the manufacturing of derivative products, replacing traditional petroleum based materials. They are widely used in composite materials, automotive interiors, household products, aviation, medical and other industries, and have excellent characteristics such as green, non-toxic, and environmentally friendly. Methanol, a byproduct of the production process, is a widely used chemical raw material used in the production of formaldehyde and pesticides, as well as an extractant for organic compounds and a denaturant for alcohol.

United States market for Biobased Carbonates is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for Biobased Carbonates is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
