Biodegradability and compostability testing refer to a series of assessments conducted on materials or products to determine their ability to break down naturally in the environment and their suitability for composting processes. These tests evaluate the biodegradability and compostability of materials based on specific standards and guidelines. Biodegradability testing assesses the rate and extent of microbial decomposition and breakdown of the material under controlled conditions.

Compostability testing, on the other hand, examines the ability of materials to undergo a managed composting process, creating nutrient-rich compost without leaving behind harmful residues. These tests help determine the environmental impact and potential

applications of materials, guiding product development and promoting sustainable waste management practices.
