Abstracts

The global Biodegradable Bone Filling Materials market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

Clinical demand: Bone defect is a common clinical condition, especially in combat injuries, traffic accidents, natural disasters, etc., the number of bone defect cases is large. Bone filling materials can provide temporary treatment and repair for these patients and help them regain their health.

Technological Advances: As materials science and biomedical engineering continue to advance, scientists are able to design bone filling materials with more biocompatibility and mechanical properties. For example, the emergence of degradable materials has provided a new direction for bone filling materials. These materials can degrade in the body and avoid the need for secondary surgery to remove the materials.
