Degradable bubble film is an environmentally friendly material that can degrade naturally under certain conditions and will not cause pollution to the environment. Compared with traditional plastic bubble wrap, the materials used in degradable bubble wrap are generally biodegradable plastics, such as starch, cellulose, etc. When the degradable bubble film is processed, it will decompose into harmless substances in a short time, reducing the impact on the environment. Biodegradable bubble wrap is widely used in packaging and filling fields and is a sustainable alternative.
