Biodegradable Electronics materials are Electro chromic, conductors, dielectric and luminescent. These materials are used to make Biodegradable Electronic components such as active components (Transistors, Diodes, Sensors) and passive components (Traces, Antenna, Resistors and Capacitors). Biodegradable Electronics are also used in environmental monitors like in wireless sensors which disappears after a chemical spill and they degrade overtime without any impact on ecosystem and hence reducing e-waste. Also, another major application of Biodegradable Electronics is in consumer electronics or their sub component which are compostable, decrease e-waste generated by electronic systems such as cellular phones or portable devices etc.
