Market players need to invest in research and development, forge strategic partnerships, and align their offerings with evolving consumer preferences to capitalize on the immense opportunities presented by the Biodegradable Stents market.

The biodegradable stents are used for treating cardiovascular conditions pertaining to the coronary artery. These stents are also known as bioabsorbable or bioresorbable vascular scaffolds and are surgically placed in the coronary artery for eluting the drug that is administered for vascular restoration and the polymer coating. The biggest advantage of these stents is that they get entirely absorbed in the vessels over a period of time, reducing the risk of complications or infections.
