## Abstracts

The global Bioenergy Power market size is predicted to grow from US\$ million in 2025 to US\$ million in 2031; it is expected to grow at a CAGR of %from 2025 to 2031.

Bioenergy power refers to the production of electricity and heat through the conversion of organic materials, such as biomass, into energy. This renewable energy source includes technologies like biogas production from organic waste, wood pellet combustion, and biofuel generation from crops, offering a sustainable alternative to fossil fuels for power generation.

According to BNEF data, electrochemical energy storage in the United States added 3.97GW / 10.88 GWh in 2021. In terms of power, it accounted for 40% of the global increase. In 2022, the United States passed the IRA, which subsidized independent energy storage for the first time. Under the ITC, new energy storage projects could offset up to 30% of the investment. The effect of the policy has initially appeared, and the energy storage industry in the United States shows an upward trend.
