According to our LPI (LP Information) latest study, the global Biogas market size was valued at US\$ million in 2023. With growing demand in downstream market, the Biogas is forecast to a readjusted size of US\$ million by 2030 with a CAGR of % during review period.

The research report highlights the growth potential of the global Biogas market. Biogas are expected to show stable growth in the future market. However, product differentiation, reducing costs, and supply chain optimization remain crucial for the widespread adoption of Biogas. Market players need to invest in research and development, forge strategic partnerships, and align their offerings with evolving consumer preferences to capitalize on the immense opportunities presented by the Biogas market.

This report studies the Biogas market. Biogas is the gaseous product of anaerobic digestion, a biological process in which microorganisms break down biodegradable material in the absence of oxygen.

Biogas is comprised primarily of methane (50%–70%) and carbon dioxide (30%–50%), with trace amounts of other particulates and contaminants. It can be produced from various waste sources, including landfill material; animal manure; wastewater; and industrial, institutional, and commercial organic waste.

Biogas can also be produced from other lignocellulosic biomass (e.g., crop and forest residues, dedicated energy crops) through dry fermentation, co-digestion, or thermochemical conversions (e.g., gasification).

China is the largest market, with a share over 30%, followed by USA and Germany, both have a share about 45 percent.

In terms of product, Livestock Farm is the largest segment, with a share about 55%. And in terms of application, the largest application is Electricity, followed by Gas Grid, Vehicle Fuel, etc.
