Biogas membrane typically refers to a specialized material used in the construction of digesters or biogas reactors. These membranes are designed to contain the biogas produced during anaerobic digestion processes. The main function of a biogas membrane is to capture and store methane and other gases generated from organic waste decomposition under controlled conditions. This process is crucial for managing and utilizing biogas efficiently as a renewable energy source or for other purposes such as waste management. The membrane needs to be durable, flexible, and impermeable to ensure safe and effective containment of biogas over an extended period.

The global Biogas Membrane market size is projected to grow from US\$ 145 million in 2024 to US\$ 358 million in 2030; it is expected to grow at a CAGR of 16.3% from 2024 to 2030.
