Bioglass refers to glass that can achieve specific biological and physiological functions. When bioglass is implanted into the bone defect site of the human body, it can directly combine with the bone tissue to repair the bone tissue and restore its function.

The surgical implant materials market has been booming and becoming an important part of the medical field. Surgical implant materials are used to replace or repair human tissue, including artificial joints, pacemakers, fracture fixators, etc. These materials must possess properties such as biocompatibility, mechanical strength, durability and corrosion resistance to ensure their safety and effectiveness in patients. The growth of the market is benefited by the aging population and increasing chronic diseases, resulting in rising demand for surgical implants. Technological innovation has also promoted the development of the field of surgical implants, including the application of 3D printing technology, biodegradable materials, etc., which has improved the customization and treatment effect of implants.
