The global Biohydrogen market size is predicted to grow from US\$ 305 million in 2025 to US\$ 1982 million in 2032; it is expected to grow at a CAGR of 31.2% from 2026 to 2032.

Biohydrogen is a type of green hydrogen derived or produced from biogases and biomass. In contrast to the other forms of hydrogen, biohydrogen can be zero or even carbon negative if it is obtained from feedstocks such as wastes and manure. In addition, depending on the biohydrogen technology, biohydrogen production can generate co-products such as pure biogenic carbon dioxide, digestate or biochar. This process further supports the decarbonisation of industries, contributing to the circular economy and helping to permanently store carbon in the soil.

United States market for Biohydrogen is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for Biohydrogen is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.

Europe market for Biohydrogen is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
