Biologic patches, also known as bioprosthetic patches or biological patches, are medical implants used in surgical procedures to repair or reconstruct tissues or organs in the body. Unlike synthetic patches made from materials such as Dacron or polytetrafluoroethylene (PTFE), biologic patches are derived from natural sources, typically animal tissues or human tissue donors. These patches offer several advantages, including biocompatibility, reduced risk of infection, and potential for tissue regeneration and remodeling.

The global Biologic Patches market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
