Biological deodorization equipment is an environmentally friendly equipment that uses the attachment and growth of microorganisms to treat odor. Its working principle is mainly based on the formation of biofilms by microorganisms on the surface of specific fillers. These microorganisms use inorganic and organic matter in the exhaust gas as carbon sources and energy sources, and maintain their life activities by degrading odorous substances. They also decompose odorous substances into harmless carbon dioxide, water, minerals and other odorless substances, thereby achieving the purpose of purifying odorous gases.
