The global Biological Hemostatic Material market size is predicted to grow from US\$ 612 million in 2025 to US\$ 926 million in 2032; it is expected to grow at a CAGR of 6.2% from 2026 to 2032.

Biological hemostatic agents are active agents that work to provide hemostasis by activating clotting factors in the final stages of the coagulation cascade. Thrombin is activated by calcium and as noted previously acts to convert fibrinogen to fibrin, stabilizing the clot.

According to our research, the global market for medical devices is estimated at US\$ 603 billion in the year 2023, and will be growing at a CAGR of 5% during next six years. The global healthcare spending contributes to occupy 10% of the global GDP and is continuously rising in recent years due to the increasing health needs of the aging population, the growing prevalence of chronic and infectious diseases and the expansion of emerging markets. The medical devices market plays a significant role in the healthcare industry. The market is driven by several factors, including the increasing demand for advanced healthcare services globally, advancements in medical technology, growing geriatric population, rising healthcare expenditure, and increasing awareness about early disease diagnosis and treatment.
