The research report highlights the growth potential of the global Biological Organic Fertilizer market. Biological Organic Fertilizer are expected to show stable growth in the future market. However, product differentiation, reducing costs, and supply chain optimization remain crucial for the widespread adoption of Biological Organic Fertilizer. Market players need to invest in research and development, forge strategic partnerships, and align their offerings with evolving consumer preferences to capitalize on the immense opportunities presented by the Biological Organic Fertilizer market.

Fertilizer promotes the development of agriculture. Excessive use of chemical fertilizer in agriculture not only resulted in a large number of environment problems but also caused serious soil compaction and soil fertility decline. Therefore, in the past 30 years, more and more governments and agricultural experts actively advocated for reducing chemical fertilizer use. In this situation, organic fertilizer and biological organic fertilizer develops very fast.

According to the 2022 Statistical Yearbook of the United Nations Agricultural and Food Organization, there are about 866 million people work in agriculture, accounting for more than a quarter of the world's total labor force and creating \$3.6 trillion in added value. According to data, North America was the region with the most fertilizer use in

the world in 2021, accounting for 32.6% of the global fertilizer market size. From the perspective of demand, the proportion of micro-fertilizers used in many European countries has reached 45-60%, and the proportion of use in the United States was as high as 60-70%. According to our "Agriculture Research Center", the global fertilizer consumption was nearly 200 million tons in 2022. According to the National Bureau of Statistics, the total output value of China's fertilizer manufacturing industry in 2021 was 618.572 billion yuan, with a year-on-year increase of 5.05%. Global fertilizer consumption in 2021 increased by nearly 12 million tons, which compared to 2020.
