Biopesticides or biological pesticides are used for controlling various insects and against pathogens that cause diseases. The various forms of biopesticides include bioinsecticides, biofungicides and bionematicides. The benefits derived from the usage of biopesticides in agriculture and in public health, programs are considerable. The global consumption of biopesticides over chemical pesticides is increasing due to its ecofriendly nature. As biopesticides are target-specific they are considered to be relatively safer to non-target organisms including humans. Registration of biopesticides is very easy hence; most of the countries have switched from chemical pesticides to biopesticides.
