The global Biologics Outsourcing Services market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Biologics outsourcing services refer to the practice of pharmaceutical and biotechnology companies partnering with external organizations to handle various aspects of the development and manufacturing of biologic drugs. Biologics are complex therapeutic molecules produced using living organisms or their components, such as proteins, antibodies, or nucleic acids.

Outsourcing these services allows companies to leverage the expertise, infrastructure, and resources of specialized contract service providers, often referred to as Contract Development and Manufacturing Organizations (CDMOs) or Contract Research Organizations (CROs).

The global demand for biologic drugs continued to rise, driven by factors such as the aging population, increasing prevalence of chronic diseases, and advancements in biotechnology. This heightened demand led to greater outsourcing of biologics development and manufacturing to specialized service providers.

The development and approval of biosimilar drugs, which are highly similar versions of approved biologic drugs, gained momentum. As biosimilars offer cost-effective alternatives to branded biologics, there was a growing need for outsourcing services to support biosimilar development, including analytical testing, process development, and manufacturing.
