Biomarker discovery outsourcing services refer to the practice of contracting external organizations or service providers to conduct research and analysis aimed at identifying and validating biomarkers. Biomarkers are measurable indicators that can be used to assess various biological processes, disease conditions, or responses to treatment. Outsourcing biomarker discovery services allows companies, research institutions, or pharmaceutical organizations to leverage the expertise and capabilities of specialized service providers for this specific aspect of their research.

Biomarker discovery is increasingly adopting multi-omics approaches, which involve analyzing multiple biological data types such as genomics, transcriptomics, proteomics, and metabolomics. Outsourcing services are incorporating integrated analyses to provide a more comprehensive understanding of biomarker signatures.
