According to this study, the global Biomarker Discovery Platform market size will reach US$ 759 million by 2031.

A biomarker discovery platform is an integrated system of technologies, methodologies, and computational tools used to identify, validate, and analyze biological markers—molecules that indicate normal or pathological processes, or responses to therapeutic interventions. These platforms typically combine high-throughput techniques such as genomics, proteomics, metabolomics, and transcriptomics with advanced data analytics and machine learning to uncover potential biomarkers from complex biological samples. Biomarker discovery platforms are essential in the development of diagnostic tools, targeted therapies, and personalized medicine approaches, as they enable researchers and clinicians to detect disease early, monitor progression, and predict treatment outcomes. They are widely used in pharmaceutical and biotechnology research, clinical trials, and translational medicine to bridge the gap between laboratory findings and clinical applications.

United States market for Biomarker Discovery Platform is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.
